

Altium deployment options

Whether you're an engineer, the manager of a design team, an executive of a larger enterprise, or an educator, Altium provides a flexible set of licensing options that will put the right capabilities on every desktop to match your unique business need.

Altium's solutions are complete and include everything in the box so engineers can take their design from concept to manufacture in a single application. This completely eliminates the need to purchase and integrate numerous add-ons at extra cost in order to increase functionality or make up a complete solution.

Altium provides the following deployment options:

Altium solutions	Benefits
Altium Designer: Core feature set	Altium Designer's core feature set allows users to exploit the potential offered by today's large-capacity reprogrammable devices. Includes complete front-end engineering design system for both board-level and programmable logic design. For more information refer to the Altium Designer feature set summary.
Altium Designer: Extended feature set	Takes the Altium Designer core feature set and extends it to include full custom board design and manufacturing capabilities. Includes complete front-end engineering design system for both board-level and programmable logic design, and full 3D PCB design and editing capabilities. For more information refer to the Altium Designer feature set summary.
'Innovation Station'	The 'Innovation Station' includes an Altium Designer core feature set time-based stand-alone 12-month license (see below for license and installation details), and includes the Desktop NanoBoard which is owned outright. For more information visit www.altium.com/products/innovationstation .

Upgrade assurance	Benefits
Altium Software Assurance	Altium Software Assurance automatically covers users for all version upgrades and updates during the 12 month agreement term. Altium Software Assurance helps you manage costs with regular predictable annual payments and gives you access to the latest technologies including the 6 monthly major version releases. Software Assurance can be purchased with Altium Designer perpetual licenses to ensure automatic version upgrades and updates during the agreement term. Altium Software Assurance is included with any time-based license option as-standard.

License options	Benefits
Time-based license	An Altium Designer time-based license gives you 12 months full access to Altium Designer, and requires renewal 12 months after the date of activation. A time-based license includes Altium Software Assurance as-standard so you can receive all upgrades and updates as soon as they become available.
Perpetual license	An Altium Designer perpetual license gives you full access to the current version at the time of purchase, as well as any service packs that may be released for that version. Perpetual licenses include a 30-day upgrade warranty, however for added protection, Altium Software Assurance can be combined with perpetual licenses for automatic access to all version upgrades and updates during the agreement term.

Installation options	Benefits
Standalone license	A standalone license allows the user to install and use Altium Designer on a single computer.
Floating license	A floating site license allows the simultaneous use of Altium Designer on as many machines as needed and use of the software is automatically controlled by a central licensing server. Pay for the number of users you want to provide access to each floating license.
